

Features & Benefits

Endurance™ VX200 Headrail System

Features

240" maximum width.

Scissor carrier track.

Self lubricating components.

Self-aligning louvers.

Lexan louver stems.

Heavy duty design.

Benefits

Allows for a larger expanse to be covered with a single headrail.

Allows for more consistent spacing and overlapping of louvers than strap carrier.

Internal parts are manufactured with Delrin or equal plastic that have been impregnated with oil. This results in a well lubricated headrail, with a smooth lifelong operation.

If a louver should ever become out of "sync" a simple rotation of the tilter chain re-aligns errant louvers.

Louver stems are clear and inconspicuous. Stems contain an ultra-violet inhibitor for additional protection from sun damage.

Endurance headrail is a heavy duty design at regular duty prices.
